## **USER STORY #1**

As a student, I want a dashboard that can help me manage my day-to-day activities and stay updated with the weather forecast and listen to music through Spotify.

When I log in to the dashboard, I want to see a Spotify section where I can browse and play my favorite songs and playlists without having to open the Spotify app separately. The section should display my recently played songs and give me options to explore new releases, top charts, and recommended playlists based on my listening history.

In addition to music, I also want to be able to see the weather forecast for my location. The dashboard should have a weather section that displays the current temperature, humidity, wind speed, and precipitation. It should also provide me with an hourly and daily forecast for the next few days, so I can plan my outdoor activities accordingly. Moreover, the dashboard should have a personalized to-do list section that allows me to create and manage tasks for the day, week, or month. The section should enable me to prioritize my tasks, set deadlines, and mark them as completed when finished. It should also provide me with reminders and notifications to keep me on track with my progress. I would like to be able to categorize my tasks, such as school assignments, personal errands, and extracurricular activities. This will help me to have a clear view of what needs to be done and when. It would also be helpful if the to-do list section could sync with my calendar, so I can see my scheduled events and appointments alongside my tasks.

Furthermore, I would like the dashboard to have a customizable layout. I want to be able to arrange the sections and widgets on the page based on my preferences. For example, I may want the weather section to be at the top of the page, followed by my to-do list, and then the Spotify section.

Lastly, I want the dashboard to be accessible on different devices, including my laptop, tablet, and smartphone. This will allow me to access it anytime and anywhere, whether I am at home, school, or on the go.

Overall, the student dashboard should be user-friendly, easy to navigate, and provide me with the essential tools I need to manage my daily activities effectively. With this dashboard, I can stay organized, productive, and on top of my schedule.

## **USER-STORY #2**

As a high school student, I want a dashboard that allows me to manage my academic tasks, stay up-to-date with important dates, and access resources easily.

When I log in to the dashboard, I want to see a section that displays my class schedule, including upcoming assignments and exams. The section should allow me to click on each class to see more detailed information, such as the teacher's contact information, office hours, and class syllabus.

In addition, I want a personalized to-do list section that enables me to keep track of my daily and weekly tasks. The section should allow me to add and prioritize tasks, set reminders, and mark them as completed when finished. It should also provide me with a calendar view, so I can see my tasks and events in a timeline.

Moreover, I want the dashboard to have a resources section that provides me with quick access to important academic resources, such as textbooks, online learning platforms, and study materials. The section should be organized by subject and include links to useful websites, videos, and tutorials.

Furthermore, I would like to have a section that displays school announcements and events. The section should enable me to filter the information by category, such as sports, clubs, and school-wide events. It should also allow me to RSVP to events and receive notifications for upcoming activities.

Lastly, I want the dashboard to be mobile-friendly, so I can access it on my phone or tablet while on-the-go. This will allow me to stay organized and up-to-date even when I am not in front of my computer.

Overall, the student dashboard should be easy to use, visually appealing, and provide me with the essential tools I need to succeed academically. With this dashboard, I can stay on top of my tasks, manage my schedule, and access important resources quickly and easily.

### **USER-STORY #3**

As a music-loving student, I want a dashboard that allows me to listen to Spotify and manage my academic tasks in one place.

When I log in to the dashboard, I want to see a Spotify section that allows me to browse and play my favorite songs and playlists without having to switch to another app. The section should display my recently played songs and give me options to explore new releases, top charts, and recommended playlists based on my listening history.

In addition, I want a personalized to-do list section that enables me to manage my academic tasks easily. The section should allow me to add and prioritize tasks, set deadlines, and mark them as completed when finished. It should also provide me with reminders and notifications to keep me on track. I want to be able to see the progress I make easily and efficiently and I prefer that the to-list is not overwhelming with lots of tools.

Furthermore, I want the dashboard to save my data, so I don't have to keep updating it every time I use it. For example, if I add a task to my to-do list or play a song on Spotify, I want the dashboard to remember it the next time I log in. This is very important to me because I would rather not have to log into every single section of my dashboard. I prefer to have one single log-in where all of my data regardless of what part of the dashboard I am in is saved at all times.

Lastly, I want the dashboard to be easy to use and navigate. I want to be able to switch between the Spotify and to-do list sections easily and access my data quickly. The dashboard should also be mobile-friendly, so I can use it on my phone or tablet when I'm on-the-go.

Overall, the student dashboard should be simple, efficient, and focus on my priorities: Spotify and managing my academic tasks. Everything on this dashboard should be very straightforward as I am not someone who is interested in figuring things out, I want everything to be mapped out for me so I can use it right away. With this dashboard, I can listen to music while staying on top of my academic responsibilities without having to switch between multiple apps or platforms.

## **User Story 4**

As a busy business man, I need a web app that will help me stay organized and focused throughout the day. I often find myself juggling multiple tasks at once, and it can be difficult to keep track of everything without a proper system in place.

With this web app, I want to be able to enter tasks easily and efficiently, so that I can prioritize my to-do list and stay on top of my work. I also want the ability to set deadlines for each task, so that I can stay on track and ensure that everything is completed in a timely manner.

In addition to task management, I also want the ability to listen to music while I work. I find that music helps me stay focused and motivated, and I want the web app to have a built-in music player that will allow me to listen to my favorite tunes without having to switch between different apps or websites.

Finally, as a businessman who travels frequently, I also need to be able to check the weather in different locations. This feature will allow me to plan my trips and stay prepared for any weather conditions that may arise.

I also do not have my laptop all the time with me, therefore I want the web-app to be able to be used just as effectively on my phone and on my tablet. There should be no limitations regarding what device I use and all features should be present.

Overall, I need a web app that will help me stay organized, focused, and productive throughout the day, whether I'm at my desk or on the go. With the ability to enter tasks, listen to music, and check the weather all in one place, I can streamline my workflow and stay on top of my game.

### **User story 5**

As a student, my ideal dashboard should provide me with easy access to several features, including weather updates, my daily schedule, the bus schedule, and Spotify music.

Upon logging in, the dashboard should display current weather conditions in my area, such as temperature, wind speed, and any relevant weather warnings. This feature will enable me to plan my day accordingly and prepare for any weather-related events.

To help me stay organized, the dashboard should also present my daily schedule, including upcoming classes, meetings, and other events. Additionally, I should be able to add and edit events as needed, as well as receive notifications for upcoming events.

Regarding transportation, the dashboard should provide me with up-to-date information about the bus schedule, including any delays or cancellations. This feature will help me plan my commute and avoid any unnecessary stress.

Finally, the dashboard should include an integrated Spotify player, allowing me to listen to my favorite music while studying or working. I should be able to browse playlists, search for specific songs, and control playback from within the dashboard.

Overall, this dashboard will be an essential tool for me as a student, providing me with the necessary information and tools to stay organized, informed, and focused throughout my day.
